## CM Micro Switch

## Operating characteristics

Definitions of operating characteristics:

OF: operating force
Force needed to add to the executer unit to actuate switch contact

RF: releasing force
Force needed to add to the execter unit to make the switch contact back to normal position

TF: total force
Force needed to make executer unit move from free position to limitation position
FP: free position
Primary position of executer unit without external force adding to executer unit

OP: operating position
The position of executer unit in case of the contact rapidly moving to the contact position for action

RP: releasing position
The position of executer unit in case of the contact rapidly backing to
normal position to action contact position

TTP: total tavel position
The position of executer unit in case of executer unit reaching the limitation position

PT: pretravel
The distance or angle that the executer unit passes since free position to action position

OT: overtravel
The distance or angle that the executer unit surpasses action position

MD: movement differential The distance or angle from action position to reversion position

TT: total tavel
The distance or angle represents the movement till action and the total movement after all actions.
